What does this involve?

- The dataset and the metadata become **visible to all users**
- The **DOI** assigned to the dataset along with the files' DOIs are **permanently registered** and become active
- The published dataset **cannot be deleted**
- It can be **linked to publications or any other product of research**
- NB: once a file has been published, it is no longer possible to add or modify an embargo on it.

The process

When a depositor creates a dataset, it is in an unpublished **draft version**.

To publish it, just click on "Publish Dataset":

- If you have the rights, it is published immediately
- Otherwise, it is submitted to a curator who validates it. The status then changes to "In review".

To learn more, you can consult the publication schemes with or without curation:

<https://recherche.data.gouv.fr/en/category/9/guide/publication-process-schemas-for-a-dataset>

In Review

When the dataset is in "review" mode, you can temporarily no longer modify it.

After reviewing the dataset, the curator can

- either publish it directly if everything is in order
- or return it to you if modifications are necessary.

In both cases, you are informed by e-mail and notifications of your personal space.

Publication

As soon as you publish it, the dataset is **in version 1.0**.

Any changes require publishing the dataset again.

Consider resubmitting **for review or republishing** according to your rights.

To know more about modifying and managing versions of a published dataset, watch the tutorial "Modifying and managing versions of a published dataset":

<https://recherche.data.gouv.fr/en/page/tutorial-managing-versions-of-a-published-dataset>
